No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 30, A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 8, Application US/09903327A

Patent No. US20020164333A1

GENERAL INFORMATION:
APPLICANT: Nemerow, Glen R.
APPLICANT: Li, Erguang
TITLE OF INVENTION: BIFUNCTIONAL MOLECULES AND VECTORS COMPLEXED THEREWITH FOR TARGEI
TITLE OF INVENTION: DELIVERY
TITLE OF INVENTION UNBER: US/09/903,327A
CURRENT APPLICATION NUMBER: US/09/903,327A
CURRENT FILING DATE: 2001-07-10
PRIOR FILING DATE: 2000-07-10
NUMBER OF SEQ ID NOS: 33
SEQ ID NOS: 33
LENGTH: 70
LENGTH: 70
                                                       APPLICANT: Hubbell, Jeffrey A.

TITLE OF INVENTION: Controlled Release of No. US20020146414Al-Heparin Binding Growth
TITLE OF INVENTION: Pactors from Heparin Containing Matrices
TITLE OF INVENTION: Factors from Heparin Containing Matrices
TITLE OF INVENTION: Pactors from Heparin Containing Matrices
CURRENT APPLICATION NUMBER: US/09/848,664
CURRENT FILING DATE: 2001-05-03
PRIOR PILING DATE: 1999-04-22
NUMBER OF SEQ ID NOS: 31
SOFTWARE: Patentin Ver. 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-10-47-484A-7

Sequence 7, Application US/1022483A

Publication No. US2004006608A1

GENERAL INFORMATION:

APPLICANT: LeBowitz, Jonathan H

APPLICANT: Beverley, Stephen

TITLE OF INVENTANCHO: TAKGETED THERAPEUTIC PROTEINS

FILE REFRENCE: SYM-007CP

CURRENT APPLICATION NUMBER: US 6/287,531

PRIOR APPLICATION NUMBER: US 60/384,452

PRIOR PILING DATE: 2002-04-30

PRIOR PLING DATE: 2002-05-06

PRIOR APPLICATION NUMBER: US 60/386,019

TITLE OF INVENTION: REPAIR OF NERVE DAMAGE
FILE REFERENCE: 117-351
CURRENT APPLICATION NUMBER: US/09/852,261
CURRENT FILING DATE: 2001-05-10
PRIOR APPLICATION NUMBER: GB 0011278.9
PRIOR FILING DATE: 2000-05-10
NUMBER OF SEQ ID NOS: 14
SEQ ID NO 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       APPLICANT: GOLDSPINK, GEOFFREY

Patent No. 5789547
GENERAL INFORMATION:
APPLICANT: Sommer, Andreas
APPLICANT: Ogawa, Yasushi
APPLICANT: Tao, Peggy
TITLE OF INVENTION: MITH CORRECT FOLDING AND DISULFIDE BONDING
TITLE OF INVENTION: WITH CORRECT FOLDING AND DISULFIDE BONDING
NUMBER OF SEQUENCES:
ADDRESSE: MORRISON & FOERSTER
STREET: 755 Page Mill Road
                                               ó,
Length 70;

Sequence 39, Application US/08989251
Patent No. 6017731
GENERAL INFORMATION:
APPLICANT: Tekamp-Olson, Patricia
TITLE OF INVENTION: METHOD FOR EXPRESSION OF HETEROLOGOUS
TITLE OF INVENTION: PROTEINS IN YEAST
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bell Sellzer IP Group of Alston & Bird, LLP
STREET: 3605 Glenwood Ave. Suite 310
CITY: Raleigh
                     APFLICANT: Reizman, Howard
TITLE OF INVENTION: No. 5618690el DNA Molecules and Hosts
NUMBER OF SEQUENCES: 15
                                                                                                                                                                                                                                   COMPUTER READABLE FORM;

Patent NO. 6017731
GENERAL INFORMATION:
APPLICANT: Tekamp-01son, Patricia
ATILE OF INVENTION: METHOD FOR EXPRESSION OF HETEROLOGOUS
TITLE OF INVENTION: PROTEINS IN YEAST
NUMBER OF SEQUENCES: 41
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bell Seltzer IP Group of Alston & Bird, LLP
STREET: 3605 Glenwood Ave. Suite 310
                                                                                                                                                                                                                                                                                                          COMPUTER: Floppy disk

The sequence is that of human insulin-like growth factor (IGF)-I which promotes the survival of retinal neuronal cells. It can be used for the treatment of retinal neuronal tissues which are suffering from the effects of injury, ageing and/or disease such as photodegeneration, trauma, axotomy, neurotoxic-excitatory degeneration, ischemic neuronal degeneration, inherited retinal dystrophy, diabetic retinopathy, Alzheimer's disease, infantile mailgnant osteopetrosis, ceroid lipotuscosis or cholestasis. The IGF muteins of the invention are produced by modifying wt IGF, esp. at the N-terminus. The sequence of IGF-1 starting from the N-terminal end is given in ARR55275. In the examples, four muteins of IGF-1 were constructed. Three of the muteins replaced each of the first three AAs of IGF-1 with a Cys. These muteins are referred to as C1, C2 and C3 are spectively (AAQ65692, AAQ65694). The fourth mutein introduced a Cys between the N-terminal Med the first AA of IGF-1. This mutein is referred to as -1C (AAQ65691). (Updated on 25-MAR-2003 to correct PN
                                     The sequence is that of a fragment of insulin-like growth factor II (IGF-
II). The synthetic peptide can be used to enhance the survival of
neuronal cells in a mammal that are at risk of dying or to treat a head
or spinal cord injury, or to enhance neurite regeneration in a mammal, or
to treat stroke, epliepsy, age-related neuronal loss, amylotropic lateral
sclerosis and Parkinson's disease. See also AAR43590-645. (Updated on 25-
MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polyethylene glycol conjugates of insulin-like growth factor muteins - including new muteins with a free cysteine in the N-terminal region.
                                                                                                                                                                                                                                                                                                                                                                  1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                           This sequence represents human insulin-like growth factor I (hIGF-I). The DNA encoding this sequence was joined in proper reading frame with a secretory leader and processing signal sequences recognised by host cells to form a structural gene downstream from and under the transcriptional regulatory control of a transcription initiation region in a vector compatible with the chosen host cells. The prepared vector may be used in the efficient production of hIGF-I by unicellular host cells, esp. yeast way be used in medicaments. The synthetic coding sequence, pref. containing host-preferred codons, is joined in the same reading frame to secretion and processing signals which allow "pre".IGF to be secreted by the host. This facilitates purification. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to (Updated on 25-MAR-2003) (Updated

A fusion protein (AAR66762) comprises a protecting peptide (AAR75658) which has a methionine residue as its C-terminal amino acid, fused to insulin-like growth factor I (IGF-I) via the methionine residue. The gene encoding the fusion protein may be used in the construction of expression vectors, which in turn can be used for the transformation of suitable microbial host calls. The polycistronic gene allows the efficient preparation of IGF-I. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

The present sequence is an insulin like growth factor I (IGF-I). A plasmid carrying a S'-upstream nucleotide sequence contg. a promoter, part of, or the whole of the silkworm nuclear polyhedroats virus (BmNPV) structural polyhedron gene, the structural gene for a desired protein, i.e. an IGF-I gene and a 3'-downstream nucleotide sequence contg. a BmNPV terminator can be used to transfect a silkworm host, resulting in the expression of the desired protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the wild type insulin-like growth factor-1 (IGF-1) sequence. This sequence is modified to produce the muteins of the invention (represented by ARR95832-R95844). The muteins created, contain a non-native cystein residue substituted for one of the first (or last) four amino acid residues of this sequence. Polyethylene glycol (PEG) conjugates are then created from the muteins, where the PEG is attatched
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Insulin-like growth factor-1; IGF-1; polyethylene glycol; PEG; triflate;

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence corresponds to human recombinant insulin-like growth factor-
1 (somatomedin-C). The protein may be produced by expression in
Bscherichia coli K-12 W3110, using plasmid pER10088, a plasmid pJU1003
derivative. The protein may be used along with insulin-like growth factor
binding protein-3 in an osteogenic composition to stimulate bone
formation in subjects with bone loss resulting from a bone marrow or
connective tissue disorder, drug-related osteoporosis, pregnancy,
lactation, chronic hypo- or hyperphosphataemia, diabetes mellitus,
anorexia nervosa, cadmium poisoning, juvenile osteoporosis, Paget
disease, periodontal disease or osteoarthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY 60

IGFs are polypeptide hormones that are similar to insulin. IGF-1 mimics the action of insulin, and the IGF-1 receptor has high homology to the insulin receptor. The peptide was used to create an analogue that acts as a ligand inhibitor. This ligand inhibitor (AAM35908) inhibits binding of IGF-1 to IGF binding protein (IGFBP). The ligand inhibitor is used to increase the level of free, biologically active IGF in a particularly used to increase IGF-1 or IGF-II bevels in the blood or brain, specifically for treating diabetes (insulin dependent or not), growth retardation, osteoporosis, human growth hormone (HGH) resistance, wounds, bone damage, amyotrophic lateral sclerosis,
to the non-native cystein residue. The PEG is attached to the free cystein through an activating group selected from maleimide, sulphydryl, thiol, triflate, tresylate, aziride, exirane or 5-pyridyl. The conjugates can also comprise a second polypeptide attached to the PEG. The conjugates may be used for the treatment of IGF associated conditions, such as dwarfism, diabetes, periodonnal disease or osteoporosis. molecular weight, and an extended circulating half life in comparison to wild type IGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to increase

Human insulin-like growth factor I (IGF-I) (AAW12342) is a known mitogen and growth factor which, when formulated with insulin-like growth factor binding protein 3 (IGFPB-3) (see also AMM12343-44), has greater effect when applied topically to wounds, or is free of hypoglycaemic activity when administered parenterally. IGF-I may be produced in transformed host cells, pref. B. coll, opt. as a fusion protein with yeast ubiquitin (see also AAT59189). A complex of IGF-I and IGFBP-3 is formed by: denaturing a mixt. of the 2 proteins; reducing the mixt.; and adding an oxidizing a mixt. of the complex. By co-folding IGF-I and IGFBP-3, significantly higher yields of both proteins in correctly folded form are achieved (almost 100% for IGF-I) and refolding is usually complete within I-3 hr
                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present invention describes an isolated peptide (A) comprising an insulin like growth factor (IGF) binding domain of an IGF-binding protein (IGFBP) or its modification. (A) binds IGF with at least the same binding caffinity as the full length IGFBP. A peptide from the present invention can have cytostatic, vasotropic, antidiabetic, antiParkinsonian, neuroprotective, osteopathic, antidiatetic, vulnerary and tranquilliser activities. The peptide is an IGF inhibitor, IGF antagonist and can be used in gene therapy. The peptide and antagonists from the present invention are useful for the treatment or prevention of cancer or diabetic complications, and for treating ischemic injury. Other diseases or injuries that can be treated with the fragment or antagonist include neurologic diseases and injuries, e.g. Parkinson's disease, amyotrophic lateral sclerosis, head trauma or multiple sclerosis, osteoporosis or arthritis. The biotinylated IGF is useful in therapeutic assays for IGFBP and in screening for IGFBP—mimetics (e.g. IGF antagoniste). AAB09773 represent amino acid sequences used in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the native human insulin-like growth factor-I (IGF-I) amino acid sequence. IGF-I mediates the effects of the growth hormones, and circulates with insulin-like growth factor binding protein-3 (IGFBP-3). The administration of null IGF-I to a cancer patient, can be used as a method for alleviating the symptoms of cancer (or slowing the progression of cancer). In an example of the method, ¥60L IGF-I is used as null IGF-I. The null IGF-I has reduced receptor binding affinity. The method is preferably used to treat breast, prostate, colon and/or lung cancer. The use of null IGF-I to treat cancer avoids the side effects associated with conventional chemotherapy such as alopecia, leukopaenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The present sequence represents a human insulin growth factor-1 (IGF-1) protein. The specification describes a method for alleviating symptoms of a non-thyroid disorder which responds to IGF or insulin-like growth factor binding protein (IGFB-3). The method comprises administering IGF or IGFBF-3 (as appropriate) with a thyroid axis agonist to a patient. Administration of a thyroid axis agonist IGF enhances the actions of IGF. Administration of a thyroid axis antagonist with IGFBF-3 enhances the anti-mitoric and pro-apoptotic activities of IGFBF-3 enhances the symptoms of non-thyroid disorders. The methods are useful for alleviating the symptoms of non-thyroid disorders or an IGF-dependent disorder, neurological disorders, pulmonary disorders, growth disorders, recovery incume bodily insults, gastrointestinal disorders, cancer cachexia, steroid induced catabolism, bone disorders, reproductive disorders, haematopoletic disorders, and disorders of glucose homeostasis 'Match 100.0%; Score 385; DB 3; Length 70; Local Similarity 100.0%; Pred. Novel insulin-like growth factor (IGF) 1 mutants that selectively bind to IGF binding protein (IGFBP)-1 or IGFBP-3, used to improve the half-lives of IGF-I and insulin.

Disclosure; Page 44; 48pp; English.

The present invention describes an insulin-like growth factor (IGF)-1

24, 25, 43, 49 or 63, optionally in combination with an amino acid at

24, 25, 43, 49 or 63, optionally in combination with an amino acid at

position 12 and/or 16 of the native human IGF-1 sequence, is replaced

with an alamine, glycine, or a serine residue. The residue at position 7

may be replaced by any amino acid. (1) can have antidiabetic, cardiant,

neuroprotective, anorectic, tranquilliser, valuesary, anorectic,

nephrotropic, dermatological, antiHIV and antiviral activities. The IGF-1

mutants are used in any methods where IGFs or insulin are used, e.g. in

treating hyperglycaemia, obesity-related, neurological, cardiac, renal,

immunological, and anabolic disorders. These disorders include lung

ci meannel short stature, increased fat mass-to-lean ratios;

immunological disorders, peripheral neuropathy, multiple solerosis,

com with any disorders, and whole body growth disorders, heart

dysfunctions, kidney disorders, and whole body growth disorders. They can

also be used for increasing serum and tissue levels of biological active

I and insulin a mammal. The IGF-1 mutants improve the half-lives of IGF
I and insulin. The present sequence represents the native human IGF-1

Sequence 70 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an insulin-like growth factor-1 (IGP-1) act ariant (I) where the amino acid at position 16, 25, or 49 or the amino acid residues at positions 3 and 49 of the native-sequence of human IGF-1 are replaced with an alanine, a glycine or a serine residue. Also described are: (1) a method for treating a disorder characterised by disregulation of the GH (growth hormone)/IGF axis in a mammal comprising administering (I); and (2) a kit for carrying out the method of (1). (1) can have cardiant, nephrotropic, hepatotropic, anabolic and antidiabetic antivities. The IGF-1 variant is useful for treating disorders such as a hyperglycaemic disorder, a renal disorder, congestive heart failure, hepatic failure, poor nutrition, a wasting syndrome, or a catabolic state where IGFBP-1 (IGF binding protein) levels are increased relative to the levels in a mammal without the disorder. The present sequence represents the native human IGF-1 protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Insulin-like growth factor (IGF) variants binding to IGF binding protein 1 and 3 (IGFBP-1 and 3), useful for the treatment of various disorders such as renal disorders and congestive heart failure.
                                                                                                                                                                                             Human, insulin-like growth factor 1; IGF-1; proinsulin; insulin; mutant; variant; cardiant; nephrotropic; hepatotropic; anabolic; antidiabetic; hyperglycaemic disorder; renal disorder; hepatic failure; congestive heart failure; poor nutrition; wasting syndrome; IGFBP-1; insulin-like growth factor binding protein.

This invention relates to a matrix comprising a substrate capable of providing attachment of a heparin binding peptide (HBB), a peptide comprising a binding domain which bindis heparin with high affinity, comprising the high peptide fragment which has a domain that binds heparin with how affinity. Included in the invention is a vascular graft comprising the matrix, included in the invention is a vascular graft comprising the matrix, complicies in a controlled manner suitable for wound healing. The matrix can be used in an article for treating dermal wounds, and in an implantable sterilized composition capable of supporting call adhesion. The present sequence represents a growth factor protein is used in an example illustrating that non-heparin-binding growth factors growth factors or an be released in a controlled manner from heparin-binding growth factors systems based on their low affinity for heparin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09

The present invention relates to a bifunctional molecule comprising an antibody or its antigen-binding portion, and a targetting agent where the antibody portifically binds to an antigen in a protein that binds to avointed in a protein that binds to avointegrain, and the targetting agent specifically binds to a cell surface protein that activates the phosphatidylinositol 3 (PI3K) signalling protein that activates the phosphatidylinositol 3 (PI3K) signalling avointed adenoviral (Ad) vector-mediated gene delivery, to cells lacking avointegrins, for enhancing Ad binding and internalisation, and in gene avointegrins, for enhancing Ad binding and internalisation, and in gene permit targetting of viral and bacterial vectors to cells that express targetted receptors. Diseases that can be targetted include cancers, vascular disorders, diabetic retinopathies, restenosis, ophthalmic disorders, hyperproliferative disorders, and hormonal disorders. The present sequence is human mature insulin-like growth factor i (IGF-1) which is used to generate fusion protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New bifunctional molecules comprising an antibody or its antigen-binding portion, and a targeting agent, useful for e.g. gene therapy, or for promoting Adenoviral vector-mediated gene delivery to cells lacking av
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 GPETICGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a matrix comprising a substrate capable of providing attachment of a heparin binding peptide (HBF), a peptide comprising a binding domain which binds heparin with high affinity, heparin or heparin-like polymer, and a protein growth factor or peptide fragment which has a domain that binds heparin with low affinity.

Included in the invention is a vascular graft comprising the matrix, in the invention is a vascular graft comprising the matrix, which is capable of supporting cell adhesion. The matrix is used for delivering low heparin binding affinity growth factor proteins or peptides in a controlled manner suitable for wound healing. The matrix can be used in an article for treating dermal wounds, and in an implantable sterilized composition capable of supporting cell adhesion. The present sequence represents a growth factor protein. The protein is used in an example illustrating that non-heparin-binding growth factors can be released in a controlled manner from heparin-binding growth factors systems based on their low affinity for heparin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matrix for controlled release of growth factor for wound healing, has substrate that attaches heparin binding peptide, protein growth factor that bind heparin with low affinity, and heparin or heparin-like polymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, bifunctional molecule, monoclonal antibody, gene therapy, cancer, vascular disorder, diabetic retinopathy; restenosis, ophthalmic disorder, hyperproliferative disorder, hormonal disorder; cytostatic, vasotropic; ophthalmological; insulin-like growth factor 1; IGF-1.

New nutritionally enhanced food compositions, useful for improving infant formula, or supplementing or enhancing the diet of infants, particularly very-low birth weight infants.
                                                                                    Improved feed for production animals, comprising plant-derived feed ingredients, and seed composition containing flour, extract, or malt from mature monocot seeds and heterologous seed-produced anti-microbial
                                                                                                                                                                                               The invention relates to improved feed for production animals, comprising one or more plant-derived feed ingredients, substantially unsupplemented with small-molecule annibiotics and as an additive a seed composition containing a flour, extract or malt obtained from mature monocot seeds and one or more heterologous seed-produced anti- microbial proteins in substantially unpurified form. The invention is useful as a feed for production animals such as poultry and hoofed farm animals. The present sequence is human codon optimised insulin- like growth factor 1 (IGF). This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLENY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for treating cartilage disorders. The method comprises contacting cartilage with an active agent such as insulin-like growth factor (IGF-1) analog with a binding affinity preference for IGF binding protein-3 (IGFBP-3) over IGFBP-1, an IGF-1 analog with a binding affinity preference for IGFBP-1 over IGFBP-3 or IGFBP displacer peptide that prevents the interaction of IGF with an IGFBP and does not bind to human IGF receptor. The method is useful for treating cartilage disorders (CD), including degenerative CD, articular CD such as rheumatoid arthritis and osteoarthritis. The present sequence is human IGF-1, which was used to illustrate the invention

                                                                                                                                                                                       ö
                         The invention relates to a nutritionally enhanced food comprising one or more plant-derived food ingredients, and as an additive, a seed composition contenting a flour, extract, or malt obtained from mature monocot seeds and one or more seed-produced human milk proteins in substantially unpurified form. The nutritionally enhanced food and food additive compositions are useful for improving infant formula. Infant formulas containing the recombinant human milk proteins are useful in supplementing or enhancing the diet of infants, particularly very-low birth weight infants. The present sequence is human insulin growth factor
                                                                                                                                                                                                                                                                                                                                                                                                             IGP-1; insulin; human; crystal structure; antidiabetic; anorectic; insulin-like growth factor; cardiant; anti-HIV; immunostimulant; AIDS; IGP-1 receptor-binding region; diabetes; obesity; heart dysfunction; acquired immunodeficiency syndrome; wasting; kidney disorder; necrosis; neurological disorder; whole body growth disorder; Turner's syndrome; immunological disorder; insulin resistance; protein coordinate data.

This invention describes a novel crystal formed by insulin-like growth factor-1 (IGF-1) that diffracts X-ray radiation to produce a diffraction factor-1 (IGF-1) that diffracts X-ray radiation to produce a diffraction contact the invention have antidiabetic, anorectic, cardiant, anti-fix dimmunostimulant activity. The novel crystal includes an IGF-1 receptor-binding region, useful for identifying compounds having compounds that interact with the receptor-binding region of the 3-D structure of IGF-1 and function as an IGF-1 agonist or antagonist. Compositions utilising the novel crystal structure are useful for reating a mammal, especially human suffering from a disorder such as diabetes; obesity, heart dysfunction, acquired immunodeficiency syndrome of AIDS-related wasting, kidney disorders, Turner's syndrome, body growth disorder, immunological disorders. Turner's syndrome, consistance and necrosis. Crystalline IGF-1 is useful for computationally constrained in a chemical entities that bind to or associate with IGP-1, and for altering changes and sout its association with a binding site of IGF-1, for designing chemical entities that bind to or associate with IGP-1, and for altering solving the crystal structures of mutante, co-complexes, or crystalline control in a control of IGF-1. The crystal structures of mutante, co-complexes, or crystalline control in a control of IGF-1. If of esigning a compound that minds the 3-dimensional surface contagonsing setting, for e.g. as a molecular weight marker or EILSA, radioreceptor assay control and studying binding properties of IGF-1, IGFBPB and IGF-1 receptors. This sequence represents the human control in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Crystal formed by insulin-like growth factor-1, IGF-1, useful for treating agonist disorders, diffracts x-ray radiation to produce a diffraction pattern representing the three-dimensional structure of IGF-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 GPETLCGABLVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

The present invention relates to a bifunctional molecule comprising an antibody or its antigen-binding portion, and a targeting agent. The antibody specifically binds to an antigen in a protein that binds to alpha integrin, and the targeting agent specifically binds to a cell surface protein that activates the phosphatidylinositol-3-OH kinase (PI3K) signalling pathway. The bifunctional molecules are useful for targeted gene therapy using targeting delivery vectors, such as adenoviral gene delivery particles. The bifunctional molecules are useful for treating viral infections, rheumatoid arthritis, cancers, cardiovascular disorders, diabetic retinopathies, restenosis, ophthalmic disorders, hyperproliferative disorders, and hormonal disorders. The present sequence represents mature human insulin-like growth factor-1 (IGF-1). It is used to prepare a fusion protein with mouse DAV-1 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New bifunctional molecules comprising an antibody or its antigen-binding portion, and a targeting agent, useful for e.g. gene therapy, or for promoting Adenoviral vector-mediated gene delivery to cells lacking av

The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site I of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are useful for treating insulin-like growth factor (IGF)-sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. AAUS8034-AAU90957 represent IR and/or including peptides and related amino acid sequences of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a crystal for X-ray diffraction, the crystal is complex of insulin-like growth factor (IGF) I or II and a region of an insulin-like growth factor binding protein (IGFBP). The crystal of the invention is useful for X-ray diffraction. The present amino acid sequence represents an IGF-I protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New crystal comprising a complex of insulin-like growth factor IGF I or II and a polypeptide, useful for X-ray diffraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 GPETLCGAELVDALQEVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

Authentically folded, biologically active IGF-1 can be produced by transformant yeast. Expression of the IGF-1 coding sequence is controlled by a promoter from a methanol-responsive gene of methylotrophic yeast. The mature IGF-1 is secreted as a fusion protein; IGF-1 is fused to an appropriate signal peptide via one or more processing sites which are recognised by methylotrophic yeast proteases. See also AAQ23300-2. (Updated on 25-WAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; insulin-like growth factor 1; IGF-1; neuronal damage prevention;

The expression vector pHT.hBGF.R.X comprises the erythromycin resistance gene, a bacterial protein secretion coding sequence, a sequence coding for hBGF, a protease recognition sequence (R) and a sequence coding for a desired heterologous protein (K). The vector is used to transform Bacillus brevis hosts for recombinant production of the heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Prepn. of insulin-like growth factor 1 (IGF-1)films - by E. coli transformant contg. improved expression vector, expressing fusion protein cleavable with enterokinase to give TgF-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method of preventing or treating neuronal damage following a central nervous system insult, involving modulating the cerebral temperature and administering a neurologic therapeutic agent. The agent may be a growth factor, such as fibroblast growth factor (FGF) or insulin-like growth factor (IGF). The method is particularly useful in the treatment of ischaemia cerebrovascular disease. The present sequence is the human IGF protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

IGF-1 is expressed in the form of a fusion protein with betagalactosidase. Since the DNA sequence corresp. to amino acid sequence Asnorly, which is the hydroxylamine cleavage site, is present in the portion of the DNA sequence linking beta-galactosidase with IGF-1 protein, the treatment of the expressed beta-gal/IGF-1 fusion protein with hydroxylamine permits the isolation of only the IGF-1 protein. The hydroxylamine permits the isolation of only the IGF-1 protein. The protein method produces IGF-1 in high yield using a simple procedure. IGF-1 can be used for controlling the blood glucose level in diabetic patients who cannot be treated with insulin, for local treatment of bone fracture and for treating congenitated or acquired growth failure patients. The hydroxylamine method (and the enzymatic method - see AAQ13568) used for cleavage of the fusion protein is more precise than the prior art use of CNBT. (Updated on 10-MAR-2003 to add missing OS field.)

This sequence represents a modified human insulin-like growth factor I

(hIGF-I). This sequence also includes a pre-sequence encoded by yeast
prefered codons, as is the rest of the gane. The DNA encoding this
c prefered codons, as is the rest of the gane. The DNA encoding this
c precessing signal sequences recognised by host cells to form a structural
gene downstream from and under the transcriptional regulatory control of
a transcription initiation region in a vector compatible with the chosen
host cells. The prepared vector may be used in the efficient production
of hIGP-I by unicellular host cells, esp. yeast. Mature human IGF-I and
c IGF-II (see also AAQA8492-93) produced in this manner may be used in
medicaments. The synthetic coding sequence, pref. containing host.

preferred codons, is joined in the same reading frame to secretion and
precessing signals which allow "pre-"IGF to be secreted by the host. This
is cilitates purification. (Updated on 25-MAR-2003 to correct PN field.)

transformant contg. improved expression vector, expressing fusion protein cleavable with enterokinase to give TgF-1.

Example 3; Page 11-12; 36pp; English.

IGF-1 is expressed in the form of a fusion protein with betagalactosidase. Since the DNA sequence corresp. to amino acid sequence (Asp) 4-Lys, which is the enzyme enterokinase recognition site, is present in the portion of the DNA sequence linking beta-galactosidase with sprotein, the treatment of the expressed beta-gal/IGF-1 fusion protein with enterokinase permits the isolation of only the IGF-1 protein. The expression method produces IGF-1 in high yield using a simple procedure. IGF-1 can be used for controlling the blood glucose level in diabetic patients who cannot be treated with insulin, for local treatment of bone fracture and for treating congenitate or acquired growth failure patients. The enzymatic method (and hydroxylamine method - see AAQ13569) used for cleavage of the fusion protein is more precise than the prior art use of CNBr. (Updated on 10-MAR-2003 to add missing OS field.)

Prepn. of methionine-insulin-like growth factor I - comprises use of

```
c A two-cistronic vector functional and replicatable in E. coli, which essentially contains DNA encoding IGF-1 and a protective peptide capable of preventing the callular proteases from decomposing IGF-1 was constructed. The DNA fragment (Fra-A-7) (AANB1580) useful in the construction of the two-cistronic IGF-1 expression vector was prepared as follows. Fras-B-4 (AANB1567) was ligated into the large EcoRI-BamHI restriction site of plasmid pfTpEBT to form pLiktrp encoding trp promoter and LH. IGF-1 encoding gene was prepared by digesting pBR222 with EcoRI and LH. IGF-1 encoding gene was prepared by digesting pBR222 with EcoRI and LH. IGF-1 encoding fragment fragment encoding IGF-1 was isolated and to which fragment was ligated oilgonucleorides mi and m2 to to form pLH36Mmtrp. See also AANB156-82. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            68
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9 GPETLCGAELVDALQFVCGDRGFYFNKPIGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY
recombinant DNA expression vector as transformant in Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY
